

Cervical Cancer is the number one of cause of cancer mortality in women in Sub-Saharan Africa, with roughly 110,000 women diagnosed annually; of these women, about 66% will die from the disease. Women living with HIV (WLHIV) are up to six times more likely to develop persistent precancerous lesions and progress to cervical cancer, often with more aggressive forms and higher mortality.

Launched in May 2018 to address this challenge, Go Further is an innovative public-private partnership between the U.S. President's Emergency Plan for AIDS Relief (PEPFAR), the George W. Bush Institute, the Joint United Nations Programme on HIV/AIDS (UNAIDS), Merck, and Roche. The partnership collaborates closely with PEPFAR partner governments to strategize on ways to provide services for women from prevention through the cancer journey. Go Further began working in eight countries (Botswana, Eswatini, Lesotho, Malawi, Mozambique, Namibia, Zambia, and Zimbabwe), and expanded services to four additional countries (Ethiopia, Kenya, Tanzania, and Uganda) in fiscal year (FY) 2021. The objectives are to screen all WLHIV on ART between the ages of 25 and 49 for cervical cancer, and to treat pre-invasive cervical cancer lesions to prevent progression to cervical cancer.

Go Further Program Highlights

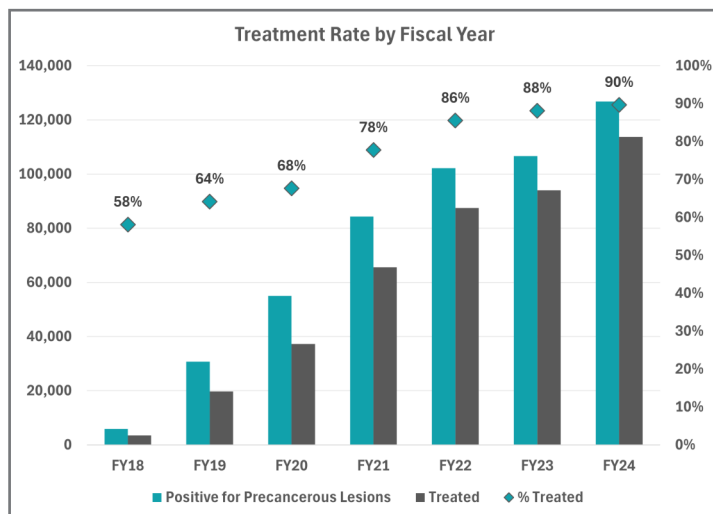

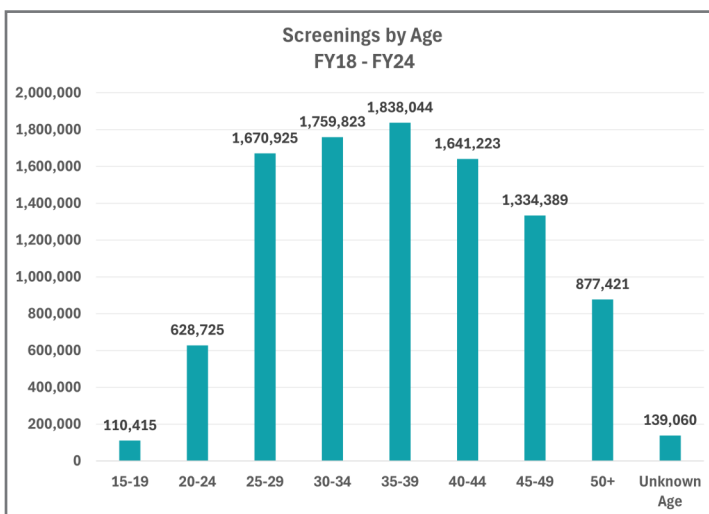

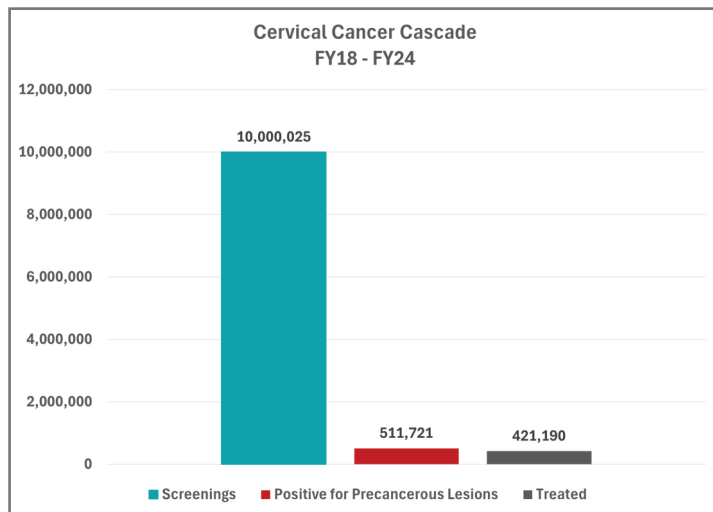

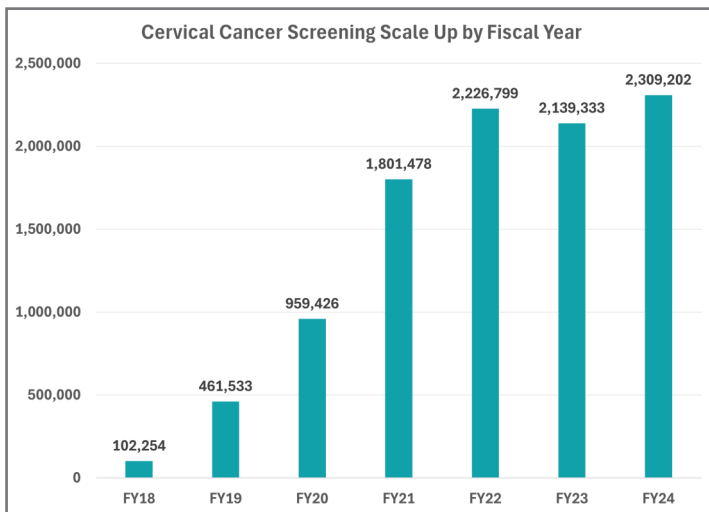

PEPFAR Program Investments

Fiscal Year	Funding Amount	Cervical Cancer Screening Target
FY19	\$29,422,895	461,533
FY20	\$23,033,753	959,426
FY21	\$39,673,711	1,801,478
FY22	\$38,283,896	2,226,799
FY23	\$37,826,816	2,139,333
FY24	\$42,943,849	2,309,202

Global Context

Women Aged 15+ at Risk of Developing Cervical Cancer (HPV Information Centre, 2023)	2.973 billion
Cervical Cancer Incidence (Age-Standardized Rate Per 100,000) (IARC/GLOBOCAN, 2022)	14.1
Annual Number of New Cervical Cancer Cases (IARC/GLOBOCAN, 2022)	662,301
Annual Number of Cervical Cancer Deaths (IARC/GLOBOCAN, 2022)	348,874
Standardized Mortality Rate Per 100,000 (IARC/GLOBOCAN, 2022)	7.1
Total Number of Women, All Ages, on ART (UNAIDS/AIDSinfo, 2023)	16,900,000

RESULTS SUMMARY

- ◆ Since program reporting began in FY18, 10,000,025 cervical cancer screenings have been conducted in Go Further countries.
- ◆ Of these, 6,868,567 (69%) were reported as first-time screenings, 183,588 (2%) were follow-up screenings after treatment, and 2,947,870 (29%) were re-screens after a previous negative result.
- ◆ 421,190 treatments for precancerous lesions have been performed for an overall treatment rate of 82%.
